Interoperability AutoCAD is designed to be platform-independent and is sometimes used by teams outside the Autodesk organization. For example, other software such as Microsoft Visio can be used with AutoCAD. AutoCAD is also used by package design engineers who use an Autodesk program to design the schematic and layout of a package. This is done by the engineer using a computer controlled plotter to draw the package elements and then importing it into the Autodesk CAD software. A Design management system (DMS) can be used to automatically link the package design with packaging assembly, test, quality and shipping information. Such systems provide package data management and tracking, including

contact and tracking information for each package to be manufactured. With the advent of the Autodesk cloud platform, several cloud versions of AutoCAD have been released. Support The company provides telephone support. Its telephone support also offers Autodesk Answers—a live online chat option. They also offer 24-hour access to Autodesk's Support Experts and Autodesk's Assurance team. AutoCAD also provides a "Community Site" to enable the community to have their questions answered and their issues addressed. This includes a Wiki, as well as forums and message boards. Other than the telephone and email support options, customers have the option of accessing support through their PC's web browser. AutoCAD is the exclusive tool of choice for many engineering companies and architectural practices, and is one of the world's most widely used software programs. This makes AutoCAD training and maintenance an important career choice for students of engineering and architecture. On April 25, 2010, Autodesk released AutoCAD 2010, the latest version of the tool. On August 1, 2016, Autodesk released AutoCAD 2017. Mac version While all three AutoCAD products have been released for Microsoft Windows, a version of AutoCAD for the Apple Macintosh platform is also available. It includes support for the native Macintosh operating system and the MacPaint GUI. Mac versions were released in 1985 for version 1.0 (A) and 1985 for version 2.0 (B). Version 3 of the Mac version (c. 1991) includes native support for QuickDraw 3D, TrueType fonts, MacPaint, the outline renderer, and enhanced graphics and editing tools.
