# [Download](#)

### **GDS Google Map WinForms Control Download**

The tool will create a new Google Map interface according to your requirements. It will then allow you to upload additional Markers and Polygons, and to define associated actions: - setup the map, - define new Markers, Polygons, Diagrams, Categories, etc... - integrate Google Maps into any application, - draw on the map images, lines, text and polygons. The tool generates events according to your actions and can thus be used with any type of Windows Forms component. You will thus be able to create applications, which may present several actions on the map. You may integrate Google Maps directly into desktop, web and mobile applications. For more information visit [GDS Google Map WinForms Control Torrent Download Requirements](#): It is an ActiveX control and is available for free, with the restriction of using it in non-commercial applications. The .NET Framework 2.0 must be installed and is automatically included with the tool. The user can also install the required license key for using the tool in non-commercial applications. The documentation and a video tutorial of the tool can be downloaded and are also available at the tool's site. Tutorials: Read my tutorial on "How to integrate Google Map in a Windows Form application using the GDS Google Map WinForms Control": License: The tool is available for free use, without being subject to any limitations. However, you may use the tool for non-commercial purposes only (except for activities that are related to conducting official mobile phone operator services), and you may publish information about this tool only if it is strictly related to GDS development. Conversely, you may use the tool for commercial purposes (including selling programs, goods, services and other products that integrate GDS Google Map WinForms Control or anything that uses it) only if you have purchased a license key.

If you use this tool for commercial purposes and wish to acquire a license key, contact GDS at the following address:

## GDS Google Map WinForms Control Crack + X64

GDS Google Map WinForms Control is a component that allows you to add map navigation features in your Windows applications. You can easily integrate the Google map technology and use the functions for locating addresses, find directions or for calculating a route. Moreover, the tool can easily provide the creation of your own specialized commands, including zoom in, zoom out, flight track, mapview or satellite image, for displaying particular items. You may also customise map data and places based on the cartographic information available. In fact, the tool is quite easy to use. The MapControl component has no dependencies, and you can simply use it with any.NET language. Moreover, it is possible to add additional features, such as the satellite or flight view mode, after it has been installed. The component features many options for customising the map navigation: colours, lines, cities, markers, icons, and also entire menu bars, such as various zoom modes, pin-point locations, bookmarks, etc. The component is also compatible with third-party components, such as the Google API, ArcGIS SDK, Bing Map Controls (for WPF and Silverlight), DevExpress, ChartFX or NI Measurement Studio. GDS Google Map WinForms Control License: GDS Google Map WinForms Control is available free of charge for an evaluation period of one month. After this, you will need to pay the license in order to use the tool on a perpetual basis. How to get the GDS Google Map WinForms Control License: Go to the Get Your Free Tool page and enter your email address. Click Send Email. After the license is sent to your email, login to the technical support page. In the Premium GDS Google Map WinForms Control Licenses section, you will be presented with a link that will allow you to download the license. You must save the license file in a safe place. You will need to keep this file for the subsequent installation. You can perform the installation several times, as long as you keep the license file. GDS Google Map WinForms Control Requirements: GDS Google Map WinForms Control has been tested in Microsoft Windows XP, Windows Vista, Windows 7, Windows Server 2008 R2, Windows 8, Windows Server 2012, Visual Studio 2010, Visual Studio 2012, Visual Studio 2013, Microsoft Visual Studio 2015 Express, Visual Studio 2017, Visual Studio 2019, JAVA,

### What's New in the GDS Google Map WinForms Control?

The tool allows you to create desktop applications with integrated interactive map systems. The tool allows you to insert the Google maps technology in your applications and thus enable the identification of addresses or calculating routes. You can generate useful functions in your applications, such as finding and downloading maps from Google, as well as customize geographical data based on the cartographic information. Several geographic items can be placed on the map, to mark locations or routes: markers, icons, polylines or polygons. You may thus indicate the placement of specific spots on the map, important buildings or other locations, as well as mark suitable routes. Moreover, the polygon elements are used for indicating areas while the numbered markers pinpoint departures and destinations. The tool also allows you to integrate auto-completion function for filling in addresses, in the designated fields. You can easily customize the colors, opacity, weight and styles of polygons, polylines, images, text, dash lines. Moreover, you can also integrate a tool that switches between map view and satellite images. GDS Google Map WinForms Control can be used with various programming languages and frameworks, including .NET, C# in WinForm/WCF/Silverlight/ASP.NET, Java, JavaScript, C/C++, HTML and XML. The tool is compatible with development environments such as Visual Studio, Eclipse, Visual SVN/Tortoise SVN or Cruise Control. The utility can be used with several third party components for acquiring online geographical data. Google Map API is a suitable solution, but the tool also supports ArcGIS SDK, Bing Map Controls (for WPF and Silverlight), DevExpress, ChartFX or NI Measurement Studio. The applications created with GDS Google Map WinForms Control can be deployed on multiple editions of Windows, Windows Server and even on mobile phones operating Windows or Android. The tool supports the integration of several communication protocols such as TCP/IP, UDP, HTTP, ModBus, USB, SMTP, POP3 or Keller. Map Viewer for GIS A software tool that enables viewing, editing, importing and exporting shapefiles or Oracle Spatial database in a QGIS Map Viewer. The utility comes with several major features: Support for layers of many types: shapefiles, web maps, raster, vector, topographic, presentation, map background, satellite, aerial,... Auto-completion and continuous editing of vector and raster features
