Unearned Interest Crack+ Free Download

The basic concept of unearned interest is to reduce the principal paid and the time cost of a loan accordingly. This allows a borrower to better manage his financial resources over time. Unearned interest software can determine the amount of unearned interest based on a specific period of time, the number of payments made during the period, the original principal amount, the current principal amount, the expected loan amortization period, the number of payments, the interest rate and the interest period. The unearned interest calculation is also known as the after-tax interest calculation, which requires the same total principal amount as a before-tax calculation, but the difference is that the interest amount after taxation is subtracted from the interest amount before taxation. This method therefore consists of applying a tax rate to the principal and interest payments made during the loan amortization period. The amount of unearned interest is calculated with this tax bracket applied and is then added back to the principal and interest payments calculated at the original interest rate without taxation. Unearned interest calculator also takes into consideration late fees which can also be added as an interest component. The late fees must be taken into account since after the original interest calculation, the borrower has paid a higher amount of principal. Loan term calculations: Unearned interest calculator can easily calculate the amount of unearned interest for a closed end mortgage, an adjustable rate mortgage, an interest only mortgage, a refinance and a combination of both. The loan term calculation can be done by setting the current loan amount and the original loan amount; the variable or fixed percentage rate, the expected amortization length of the loan, the indexation option, the number of payments, the interest period and the calendar year. There are 3 types of loan terms calculations: 1. Annual rate: This option calculates the unearned interest amount for an annual term payment. 2. 360 payment option: This option calculates the unearned interest for a 360 monthly payment. 3. Index Compound: This option calculates the unearned interest for a mortgage where the index is compounded into the final principal or interest payment. The mode of operation of the unearned interest calculator can be simplified by selecting from a list of pre-established values. The user can choose from 6 unearned interest modes of operation: A. Standard (NOPAY) B. Manual C. Manual with Taxation D. Manual with Taxation with Late Fees E. Manual with Taxation with Late Fees

What's New In?

Enter the principal amount of your loan, the finance charge (interest), and the number of months you have left. The program will compute the remaining unearned interest and the finance charge on each monthly installment. ColorManager is a powerful and easy-to-use high quality desktop publishing program for Windows. ColorManager is a powerful and easy-to-use desktop publishing program for Windows.
