Label Matrix: Get Your Software Today! In the early 1940s, label makers of different shapes and sizes were aimed at individual contractors performing projects on a fairly small scale. The first common labeling machine (also called a line printer) was the Lincoln Typewriter Marker. The Lincoln Marker is still built today (it is now manufactured by Papermill Corporation in China). The ink transfer was fixed by a rubber pad in the mat which was pressed onto the label with a round or square mat. A second model, the Foster Label Marker was built at the same time. Here's a typical label printing setup in a small office. Some simple mistakes can cost thousands of dollars. Lincoln and Foster labeling machines were made around the same time. However, they were different in a lot of ways. The Lincoln machine had a round mat that was pressed onto a label by a platen. The rotary device below the label mat was used to print the label, and the platen pressed the rubber pad onto the label. The Foster Label Marker was designed to reduce the time and effort necessary for printing labels. The device was also easier to use than the Lincoln machine. The Foster Label Marker used a reciprocating printing engine. A three-row matrix machine was developed in the 1950s. This type of machine was used for larger labels, like airplane labels. Label Matrix: Get Your Software Today! It was designed to be used at a much larger scale than previous labeling devices. The machine was automated and used a 3- or 4-row matrix of pins. The matrix encircled the label, and the laser printed the label. The pins punched holes in the matrix, and the label was set in place, and then the pins were rotated to imprint the label. The rows of pins were moved with servomotors that were controlled by a computer. In the early 1950s, Perpetual was founded by Jack Saaremaa, who began the world-wide sales of the Perpetual Label Center. Label Matrix was the world's first integrated labeling equipment. 1cb139a0ed
