implemented in waveform-like signal analysis. - The progress of analysis can be monitored in real-time on the on-screen. A total of 6 options are provided in JMCAD for the measurement of waveform-like and waveform-like signals, as follows: Time Sync: The time synchronization method used in JMCAD is based on an external reference and can be synchronized to any other AC or DC reference input. Waveform: The waveform-like and waveform-like signals can be measured and analyzed. The waveform measurement can be accurately obtained even if the sample rate is not a multiple of the external reference frequency. Waveform Delay: You can adjust the display and measurement delay between the waveform-like and waveform-like signals to enhance the measurement accuracy. Waveform Layer: This measurement mode uses a digital oscilloscope with a width of 2000 counts, a sweep speed of 10 times per second, and a measurement accuracy of 0.1%. You can measure the waveform of the waveform-like signal at the waveform layer and export it into a waveform-like signal. Waveform-like Signal: You can analyze and analyze the waveform-like signal at waveform-like signal measurement by setting the mode using the JMCAD toolbar.
