AutoCAD 2010 introduced a "R" command that launched a web browser to a web-based documentation page, if available. With AutoCAD 2010, users can create and send HTML documents of their drawings, with a "Send To HTML" option within the "Publish" command. In AutoCAD 2010 and AutoCAD LT 2010, the ability to work with DWG files was enhanced with the inclusion of the DWG 2.0 file format. This format supports Vector/Edge-based object information, including DXF (AutoCAD only) and DWG (AutoCAD, AutoCAD LT and Autodesk Design Review only) object information. These files can be viewed and edited in the AutoCAD/AutoCAD LT application, or in other DWG-enabled applications. Any new object or layer in the DWG file is represented by its own layer. In this DWG 2.0 file format, each new layer is represented by a separate row and the new objects created within the new layer are saved and linked to this layer in the file. Layers created are drawn with their own color and linetype. These objects can be modified directly within the DWG file, but if they are linked to a specific layer, the layer is modified instead. A-studio provides a cloud-based CAD service for architecture, civil engineering, and construction projects. In 2013, AutoCAD customers were able to use a cloud-based service, also called A-studio, for CAD-related services. It was built upon a cloud-based CAD platform, which was powered by Microsoft Azure.
