"The perfect game for those who love RPG's and enjoy PvP or simply seeking new arenas to play in." - GameZarcad "DARK SPIRIT SONG Amazing game and one of the best in the genre!" - DicksV "I am completely in love with the game. Definitely give it a try!" - MinorFantasyJ "The base of this game sets it apart from the crowd with its aesthetics, the skill tree and intriguing story and characters. If the game is done correctly, you will certainly enjoy having a battle avatar to follow through this journey." - ShenTENG "This is a platform RPG that very few games emulate and even fewer ever make. The level of detail is often times greater than other games in the genre. The combat is simply amazing and there's also plenty of non-combat mini-games and quests. It's not only an RPG, but it plays like an RPG. The story has plenty of twists to keep you on your toes. Though the combat system isn't as refined as some other games in the genre it is unique and satisfying. This game deserves to be in your library!" - PGIS_Ripped "You've never had a more beautifully designed RPG that you can run with a controller. It's more than just some pretty graphics. It's far beyond visuals - it's an experience that you will never forget." - BlackMage "In our state of the art world, they've made a game that takes you into another dimension." - Woofie_DG "It's a pure RPG that won't disappoint the RPG veteran and the newcomer alike." - PacOni100 "This is an RPG game that has it all. It offers deep, endless gameplay that keeps you hooked." - Vollur4 "I have really enjoyed this game, and I recommend it to all who need a good RPG." - CripsyPatra "I love this game. The music, graphics, animations, sound, are all excellent and make it a must have for all RPG fans. The combat system works great and the combat can be rather hectic at times." - bf66b2d33

What's new in Elden Ring:

XBOX OneThu, 08 May 2016 07:20:23 +0000 Apache Cordova and PWA Technology: From concept to container - part 1

If you haven't already noticed, tech has finally caught up to the concept of App Stores: you can now build robust cross platform games and applications. This has huge implications for web and mobile developers because it connects the web and native system devices which, for the time being, generally have been considered completely separate.

The top web browsers and mobile operating systems now allow web developers to create rich content in a user's browser with every type of web technology, including web application frameworks, scalable data-storage, native clients, ports and virtual machine layers. Web frameworks have given developers the ability to build compelling single page applications (SPAs) - Web technology that fulfills the promise of mobile apps with the perceived benefits of mobile websites.

Until now, the browser has been a second class citizen. Web developers could build and deploy web applications, but the browser only ran such web applications. This is because web technologies were unable to provide or define browser functionality (such as: UI and rendering). Since the browser was unable to define its own UI, it was not an application platform; and, since the browser was unable to run code, it could not perform any of the tasks necessary to be an application.

In a way, this left the browser as a public website monitor or portal - web developers could build a web application "in" the browser, and it would display the same content the browser could if the browser were a fully formed application. However, since the browser is still a web browser-viewer that serves web content, it cannot define itself as a full-featured OS: it could not run any applications, of its own code or of web technologies.

Today, such legacy web technologies now have players that are leading the migration to state-of-the-art cross-platform frameworks, such as Titanium, React Native, Cordova, and Appcelerator, all providing tools to make web technology safe and performant on a variety of devices.
