Photoshop is a robust design and editing tool. It also comes in a Lite version that is a good way to get started. It is inexpensive and has many limitations (such as only having layers, no brushes, and limited features). Photoshop also comes in three different paid versions: Professional, which is the standard edition of Photoshop (\$399 for the Plus version), Expert, which has more features, and Master Collection, which has even more features. The following sections describe each version.

Getting Familiar with Photoshop's Interface

The Photoshop interface starts by introducing you to the most powerful Photoshop feature: the ability to create new images. Images are created by clicking the New Image icon (shown in the margin) and then selecting a template from the template library that comes with Photoshop (refer to Figure 7-1). You can choose a photo from the media library that you can already have in your computer or you can start with a blank canvas. The New Image window lets you adjust the size of your image in increments from Small (3 inches on the sides) to Huge (12 inches by 16 inches). You can also change the resolution (from 4 megapixels to more than 1,000 megapixels) and the number of colors (from 16 to 256 or more). You can change the color mode by choosing from CMYK (four colors in black, cyan, magenta, and yellow), RGB (each of red, green, and blue — similar to the color of light), and CMYK+A (which adds the effect of the Pantone colors).

FIGURE 7-1: The New Image window is where you can create and edit images. Although the New Image window is useful, for the most part, you use the main Photoshop window for image editing. That said, the New Image window provides a lot of useful information, including the layers, colors, paths, and blending modes available in the image. Figure 7-1 shows this window.

Photoshop window options

The Photoshop window opens with three main areas: The main screen with the workspace and tools The Layers panel The Timeline panel I'm not going to cover these two panels in detail, but a few topics deserve a mention.

The workspace

The main screen is the canvas of the image you are working on. You can have up to 99 layers on the canvas at one time. You can switch to a different layer by selecting it from the Layers panel

Q: How to extract last string from text? I have a String like this: "001_3370&0&001" the string will be text value from database as shown above. I want to extract the string just after the last "&". Can any of you please help me. Thank you.

A: Try this: `String last_string = "your string is located at the end"; int size = last_string.length() - (last_string.lastIndexOf('&') + 1); String ret = last_string.substring(size, last_string.length());` That's it.

When the Civil War ended the Rt. Rev. Henry Codman Potter, the rector of Christ Church, was assigned to General William Tecumseh Sherman's military office in the South. After the war, in 1865, he toured Europe and the Near East (and other places) and wrote his *Book of Travel*,^[2] described by H.W. Brands as the first major work of American travel writing. (It was the same year that Harriet Beecher Stowe wrote her own widely read travel book, *Among the Hills of Tennessee*,^[3]) The book was dedicated to Helen Codman Potter, the daughter of Henry Codman Potter and Mary Hartwell Fitch, who had just returned from their 1864 journey to California.^[4] The first chapter, published by Charles Scribner's Sons in 1867, was entitled "Voyage Around the Globe". It may be described as a travel narrative in the form of a diary. An excerpt from the original book is in the Internet Archive. The excerpts cover nearly the first third of the book, and include the author's introduction about how he intended it to be read and the extensive edits that he made after he published it. I have not read the book itself yet. The book makes heavy use of a three-act drama. The episodes are "Going Around the World", "Among the Ruins of the East", and "Under the High Seas" and cover the author's travels and experiences during his 1866-1867 world tour. The original book was illustrated with water-colors, chiefly in pen-and-ink and pencil. During the early 1900s, the New-York Public Library held a collection of the colored sketches; today there are a number

Development of a functional rabbit nanorobotic assembly cell. A major obstacle in the exploration of the mammalian immune system is the complex anatomy of the immune organs that includes multiple cell types, whose dynamic interplay leads to self-regulation of the whole organ. An artificially controlled cell assembly is needed to overcome these difficulties. Here, we developed a functional cell-assembly robot (CAR) from a vascular endothelial cell (EC) sheet and a magnetic chip based on a superparamagnetic iron oxide nanoparticle (IONP) coating. In this setup, ECs were differentiated from human embryonic stem cells (hESCs) to obtain a 3-D polyhedral microtissue (pti), and the magnetic chip was made by attaching the IONP to both sides of ECs. After detachment, free-floating ECs were attached to the CARs using microneedle arrays. The prepared CARs were injected into the hepatic portal vein of Sprague-Dawley rats, and transplanted ECs were visualized in the liver and detected by an MRI. The shape, size, and signal intensity of the CARs were spatially programmed by a magnetic field and could be controlled in situ. In addition, the CARs assembled in the hepatic lobes could be manipulated with a magnetic field. These results indicate that ECs assembled by IONP-coated CARs can efficiently circulate through the hepatic lobes and that ECs are able to home to tumors in vivo. The CAR may be applied to a variety of biomedical fields.

ACQUIRE LEVERAGE AS A BETTER TOOL FOR

AUTOMOTIVE INDUSTRY STRATEGIES It is estimated that approximately \$1 billion of overhead is incurred annually in the creation of advertising that is counterproductive to automotive dealership and OEM strategies. This overhead may be deducted from the bottom line and therefore should be eliminated. The economic value of advertising should be determined by the value of the one dollar invested. This will not be achieved through the recruitment of junior sales staff but through the usage of technology to reach a qualified and interested customer.

TELEPHONE-BASED INDUSTRY LEVERAGE Advertising competition is increasing. With increasing competition comes the decision to push the advertising budget down to the lowest bidder. The loss of the significant percentage of revenue coming from traditional print advertising drives the bottom line even lower. The independent car dealer and the auto manufacturer are united by a common bond - the desire to keep the user experience
