# Software Download Logitech Quickcam Messenger [WORK]

The Logitech Quickcam finally includes a 360° swivel, a 2.7-megapixel digital camera, built-in microphone and streaming video. The USB camera is perfect for desktop and travel presentations and it can easily be streamed from PC to PDA or PDA to PC to be shared with others. The 360° swivel and built-in microphone let you shoot video from any angle for easier collaboration and the built-in video streaming lets you share your photos and videos online for your friends to view. Reviewing the options for the Logitech Quickcam, you get a host of features in this Web-enabled camera. For example, you have a new swiveling screen to take videos of yourself from any angle, and a built-in microphone that allows you to chat with other people at the same time. The Logitech QuickCam NVR 6000 supports a 1080p HD video resolution for both video and audio. It also has an integrated microphone and speaker, so you can make video calls from your computer with Microsoft Skype, or you can go places with video calls to friends or family. For whatever reason, the driver updated fine, the desktop started up, but the camera was not being recognized anymore by the computer. The driver changed correctly, but the camera didn't work anymore. I put the cam back in and downloaded and installed the original logitech cam program which came with the camera. You will have to follow the instructions to get it up and running. So I followed the instructions to install the driver and it worked fine for the most part, but when I went to camera test the screen stayed blank. I've tried a few different webcam software programs and the best one I found so far is Kazam. I hope you find this useful in the future.
