Automating your SQL Server environment is a multi-step process. SQL Server provides a number of powerful tools that can be used to automate or simplify the development and deployment processes. Some tools in SQL Server are built in, while others can be used only on certain editions of SQL Server. SQL Server Integration Services (SSIS) is a suite of services that help developers and administrators work with tables and data-aware applications in SQL Server. SSIS enables you to develop data-aware applications that use a structured, data-centric approach.
