Poddycast

The program uses text files with names of keystrokes and macros to perform repetitive tasks like browsing episodes of podcasts, creating playlists, and replaying the last 30 seconds of a podcast. Keymacro allows users to save their standard keyboard shortcuts as macros. Once assigned to the program, those shortcuts can be triggered by one keystroke. For instance, you can assign the default Podcast Browse shortcut Ctrl + G to a macro in the Keymacro window. You can then press the command key and type Ctrl + G to browse the latest episodes. The results of this macro are stored in the macro file. It's possible to create as many macros as needed. The macros can be triggered by any keystroke or combination of keystrokes. To create a macro, click the macro icon at the top-left corner of the window and type in the macro name. For instance, you can create a macro called Browse which, when triggered by the command key and any keystroke or combination of keystrokes (for instance, Ctrl + F), will display the Podcast Browse window. If you want to trigger the macro while you're typing, click the red button just below the macro name. Then, you can press any keystrokes or key combinations, and the macro is triggered. The Macros window is also used to define text files with names of keystrokes or macros. You can assign a text file with a macro name to any shortcut, as well as assign a macro to a text file. For instance, you can assign a text file with the name Browse2 to the Browse2 macro and press the command key to start the Browse2 macro when you're in the Podcast Browse window. The results of the macro are stored in the text file. The program supports different languages including English, German, French, Spanish, and Portuguese. It's also possible to select different keyboard layouts. Unfortunately, we encountered issues while testing the German keyboard. Please read the Notes section at the end of the review for important information before purchasing. It contains links to recommended apps and resources for troubleshooting. What's New In Poddycast?

Poddycast is a stylish podcast player that has standard audio navigation controls and support for creating custom playlists with favorite series. It's incredibly easy to use, even by those who aren't skilled with the computer. 30 Day Trial "an excellent podcast player" 70 by Gert Coopmans Aug 17, 2017 I would like to start off by saying that if you are looking for a podcast player for Windows then Poddycast is one of the best podcast players available on the market today. The reason I would give this a rating of 10 out of 10 instead of 7 is because it really does work great. I have used many different types of software and podcast players over the years and have always been disappointed with the product so I really wanted to use Poddycast and try it out. I was not disappointed, Poddycast did exactly what it said it would and it worked without a hitch. This was my first experience with a podcast player and I was happy to say that it did everything I wanted it to do. The one major issue I have with the podcast player was the volume. I found the audio to be very loud and could not even hear the audio in some of the episodes. The great thing about this product is that even after you have it installed on your computer it keeps working after you have your program install closed down. I also really liked that it did not add a bunch of things to my computer that I didn't know it was doing. Overall I really liked the product, my next step will be to update to the paid version, but I can't wait to see what it will do with that version. Overall I would recommend Poddycast to any windows user who is looking for a great podcast player. "A Must Have" 4,500,000,000 by alwynnfirmo Jul 23, 2017 Just download this app, and you will be pleased with the app. My Husband is a huge Linux Fan, but he loves my podcasts, so I have to convert them to Windows Media Format, that's when I'll have to use this application. So far, I have converted about a dozen of them. "GREAT App" 100 by OR2LN7 Jul 14, 2017 Really easy to use and I love that it does every feature I need it to do. The only thing is that it gets a little annoying at times when you have it on, but it is really easy to mute it. Great app! "Just what I needed!" 5 by ka-sunrise Jun 07, 2017 "I've used multiple different players over the years. I've always found them to be hard to
