Photoshop is the crown jewel of Adobe, and represents a strong contender against the more established competitors. New Presets not only add another welcome layer of tool-tips, but also open the door for even more complexity, giving users a variety of stand-out pre-configured workflows based on different needs. If you use the iPad to "sit in the field" and process your photos, you're missing out on your best shot at an awesome image. For those who want to be a little more precise when it comes to their editing (or to select a better BG for a specific shot), this will make perfect sense. What makes it great is that your touch can be made to feel natural as more and more adjustments are added, with the fallback of the slider being the most obvious option for fine-tuning. There are also plenty of features to allow you to make this a one-stop review and shopping experience, while supporting smart size sliders, the ability to view the effect of your edits directly in the preview, and more. Sometimes, you just don't have a camera anymore. Even if you do, shooting MRAW or SR1 is still the only way to source your files. You can also bring your Adobe RAW files straight to your Lightroom sessions, easily converting the files to DNG or TIFF. Another excellent new feature is the ability to use the handy 2-merge feature inside Lightroom, so you can compare the 2-meters of data you get from the Merge to save your time and the photos even faster. The Sunset Poster Filter is perfect for a range of creative projects, from home decor to wedding and business graphics. You can customize the filter yourself, or let the Designer do the hard work for you. It also uses Cutting-Edge AI technology for endless creative possibilities.
